

Engineering Note

Subject: Fortune 1000 Export Wizard
Author: Carol Spear
Date Created: 8/28/2002
Product: Fortune 1000 payroll for versions 5.00 and higher
Acomba payroll software version 4.51
Version: 1.00

SUMMARY:

The Fortune 1000 payroll export wizard allows you to create an import file for the DOS based Fortune 1000 payroll software and the Acomba Windows based software.

The filter file created as a result of running the wizard is named FORTNEXX.FLT (The X's represent the pay class id). The name of the import file created when the export process is complete is PIMPORT.XXX. The X's represent a three digit number which is generated by the wizard. The file description displayed under the available exports list is 'Fortune 1000'.

The Pimport file should be moved to the data folder under the company folder if that was not the path selected in the Fortune 1000 export wizard. (The default path which is created when creating a new company within the Fortune 1000 or Acomba software is C:\F1000.DTA. For each company that is setup in the software, a folder is created under the C:\F1000.DTA path with the company name. A data folder is created under the company folder.)

After the export process has been completed in PayClock, a message will be displayed "Fortune 1000 for versions 5.0 and higher, would you like to import now or later?" when you run Fortune 1000 or Acomba. If you choose 'Now' the data will automatically import into Fortune 1000 or Acomba. An error message will be displayed and a Pimport.err file will be created in the data folder only if you have errors importing.
